# **1. Device and Software Configuration**

**1.1** Device appearance

- 1. DC Jack Power interface (Power input- interface-1)
- 2. LED status indicator:

<b>PWR LED:</b> When it is confirmed that the PoE input or DC input power is powered on, this LED is always on when the power is turned on.
<b>Fail LED :</b> System problem warning LED ,Operating system storage data cannot be accessed , (The light is always on when there is a fault).
<b>Online LED :</b> Online working LED , It flashes during the system startup process, and stays on after the system startup is successful and confirmed, (Indicating that the Ready state is successful).
Ethernet port LED : Link/Act connection LED from ETH1 port to ETH4 port

- 3. Reset button (to restore the factory default, please press it for about 10-15 seconds. The Online LED and Fail LED will flash at the same time, indicating confirmation. You can release the button and wait for the system to return to the factory default).
- Gigabit / ETH1 (POE) Ethernet port, The WAN or LAN port can be changed through software configuration (Power input- interface-2).
- Gigabit / ETH2 (POE) Ethernet port, The WAN or LAN port can be changed through software configuration (Power input- interface-3).
- Gigabit / ETH3 Ethernet port, The WAN or LAN port can be changed through software configuration.
- Gigabit / ETH4 Ethernet port, the WAN or LAN port can be changed through software configuration.
- 8. GND ground screw pad , The contact point for the housing ground screw of this device.

## **1.2 Setup Preparation of Device**

Please PC link to Device used cat5/6 Ethernet cable. The following setup uses a Windows PC, user OS may vary.

Step 1: Please click on the computer icon in the bottom right window, and click "Open Network and

**Step 2:** After click left side "**Ethernet**" function, click on the right side "**Change adapter options**" again.

Settings	– <b>–</b> ×
命 Home	Ethernet
Find a setting	Ethernet
Network & Internet	Ethernet 2
⊕ Status	
🥼 Wi-Fi	₽ 5G_DT Connected
記 Ethernet	Related settings
ଳ Dial-up	Change adapter options
% VPN	Change advanced sharing options
	Network and Sharing Center
과 Airplane mode	Windows Firewall
(y) Mobile hotspot	

Step 3: In "Change adapter options" Page. Please find Ethernet (Local LAN) and Click the right button on the mouse and Click "Properties"

$\leftarrow \rightarrow \cdot \cdot$	N 🔮 « All C	ontrol Panel Items > Network Connections	
ile Edit Vi	ew Advance	1 Tools

# **2.**Operating Mode Introduction

## 2.1 Router Mode

When administrator select use Route mode then system can set 1WAN 3LAN Router also can select 1LAN 3WAN and 2WAN/2LANoutbound load balancer.

This Router mode support IP Routing setup/Firewall/HA/VPN/Multi-WAN/QoS enforcement and Built-in AAA Radius server

## 2.2 Captive Portal Mode

If the environment already has a router or firewall device, administrator demand is only to add the new page hotspot function, this time can be switched to Captive Portal mode and connected in parallel to the router or firewall equipment can be completed (The mode is no Router NAT function in this mode).

(The default IP of this mode is also 192.168.2.1, but it is not designed to be linked to the IP location of Router mode. When switching to this mode, please make sure that the IP network segment of the connected computer is also the same as 192.168.2.X. You have successfully entered this mode. model)

# 3. System Configuration

CERIO's DR-4000 is multifunctional authentication Gateway, support multi-WAN outbound load balance. The DR-4000 Built-in hardware independent VPN engine administrator can build a secure tunnel in the network environment and support High Availability can make sure that the network is working normally.

## 3.1 WAN Setup

Administrator can set one WAN or multi-WAN load balance in the WAN Setup function. Please click System → WAN Setup

🖨 System 🚽										
WAN Setup	_									
WAN Trading Only on	== WA	N List					III WAN Port			
WAN Iramo Setup	#		Active		Mode	Edit	WAN Port	1 WAN / 3 LAN Port		~
	0	On		PPPoE		Edit	Discuss Bask	WAND		
							Primary Port	where we have a second se		Ľ
							NAT Engine	Enable	Olisable	
SNMP							:≡ DNS			
							DNS1			
Log Server							DNS2			

## **WAN Port Setup**

🖬 WAN Port		
WAN Port	1WAN/3LAN WLLL	~
	1WAN/3LAN WLLL	
Primary Port	1LAN/3WAN LWWW	
	2WAN/2LAN WWLL	

WAN Port: Administrator can select 1WAN/3LAN or 1LAN/3WAN or 2WAN+/2LAN, the  $\geq$ default is 1WAN/3LAN Port.

Physical Ethernet Ports Settings Detailed list of different WAN and LAN ports:

	Ethernet Speed	1Gb	1Gb	1Gb	1Gb
Mode / Port			ETH2	ETH3	ETH4
1	1WAN(1Gb)/3WAN(1Gb+1Gb+1Gb) / WLLL	WAN	LAN	LAN	LAN
2	1LAN(1Gb)/3WAN(1Gb+1Gb+1Gb) / LWWW	LAN	WAN	WAN	WAN
3	2WAN(1Gb+1Gb)/2LAN(1Gb) / WWLL	WAN	WAN	LAN	LAN

WAN List: When selecting Multi-WAN, the WAN Priority setting will be displayed. Please click the Save button and the system will display the list of Multi-WAN.

III WAN List						
#	Active	Mode	Edit			
0	On	Dynamio IP	Edit			
1	On	Dynamio IP	Edit			
2	On	Dynamio IP	Edit			

When selecting 2WAN up, you can set the load balancing priority setting on the WAN traffic setting function page.

WAN Priority : The system will first determine the priority of 3WAN, The smaller the value, the higher the priority. If setting to 1/1/2, it is WAN0/WAN1 Load Balance, and WAN2 is used as Backup function. If it is setting to 1/1, it is WAN0/WAN1 Load Balance. If it is setting to 1/2, WAN2 is used as Backup function..

WAN Priority		
WANO Priority	1	~
WAN1 Priority	1	~
WAN2 Priority	1	~

- Primary Port: If set 2 WAN or 3WAN function, administrator must select one primary for  $\geq$ WAN Port, The WAN Port "primary port" setting, which mainly allows the system to use through the set WAN port, such as "system time" or DNS access, etc. If there is no special application, Please set to the default value "WAN0 ".
- $\succ$ NAT Engine: If enable the function then NAT will up performance, but firewall and routing rule of DR-4000 will auto disable.

 $\succ$ 

### WAN List

Administrator can set four connection types for the WAN port: Static IP, Dynamic IP, PPPoE and PPTP, at the same time can also Enable or Disable for NAT or DMZ functions. Please click Edit button in WAN List.

I≡ WAN List						
#	Active	Edit				
0	On	PPPoE	Edit			
1	On	Dynamio IP	Edit			
2	On	Dynamio IP	Edit			

Edit: Administrator can set WAN function.  $\geq$ 

I≣ WAN Setup			I∎NAT		
WAN	Enable	ODisable	NAT	Enable	○ Disable
₩AN Settings			I≣ DMZ Setup		
Mode	PPPoE	~	Mode	Disable	~
<b>≣</b> PPP₀E					
User Name	73137845@hinet.net				
Password	•••••				
МТИ	1492				
Reconnect Mode	Always On	~			
I≣MAC Clone					
Mode	Default MAC Address	~			

- WAN Setup: Administrator can set Enable or Disable for the WAN Port function.
- WAN Settings: Administrator can select Static IP, Dynamic IP, PPPoE and PPTP type of the WAN Port.
- MAC Clone: The MAC address is a 12-digit HEX code uniquely assigned to hardware as identification. Some ISPs require you to register a MAC address in order to access to Internet. If not, you could use default MAC or clone MAC from a PC.
- NAT: Administrator can set Enable or Disable the NAT function. If Disable NAT function administrator must manual to set routing.
- DMZ: DMZ is a physical or logical sub-network that separates an internal local area network (LAN) from other untrusted networks, usually the Internet. External-facing

servers, resources and services are located in the DMZ so they are accessible from the Internet but the rest of the internal LAN remains unreachable. This provides an additional layer of security to the LAN as it restricts the ability of hackers to directly access internal servers and data via the Internet.

## 3.2 WAN Traffic Setup

WAN Traffic setup function improves the distribution of workloads across multiple computing resources. WAN Traffic function aims to optimize network resource use maximize throughput or minimize response time and avoid overload of any single WAN port resource.

If administrator set multi-WAN configuration, administrator can assign weights or speed weights to WAN in the "WAN traffic setup" function to indicate the percentage of traffic that should be sent to each WAN.

🖨 System 🗸			
WAN Setup			
WAN Trafflo Setup			
	Load Balance Mode		
SNMP	Mode	Assign Weight	~
	Connection Mode	Source IP Based	~
Log Server			

- $\succ$ Mode: If set multi-WAN, administrator can select Load Balance by Assign Weight or Line Speed Weight.
  - Assign Weight: The WAN Assign Weight function can setup handle more requests and handle fewer requests. Assigning weights to WAN allows the DR-4000 appliance to determine how much traffic each load balanced server can handle, and therefore more effectively balance load. The Weight set Max=10 unit.

WAN0 Weight	1	33%
WAN1 Weight	1	33%
WAN2 Weight	1	33%

Line Speed Weight: The function requires administrator to definitely specify the real upload and download line speed of each WAN interface, the system will calculates the maximum bandwidth for all WAN interfaces and then the flow distribution.

Line Speed Weight		
WAN0 (U/D)kbps	1024000	1024000
WAN1 (U/D)kbps	1024000	1024000
WAN2 (U/D)kbps	1024000	1024000

 $\succ$ Connection Detect: Enable connection detection, set the target IP of the specified Ping, and set the interval period of each Ping in "seconds". Set the Failure Count after the number of failures to truly enable WAN load balancing .

Connection Detect					
Service	Enable	○ Disable			
IP Address to Ping	168.95.1.1				
Ping Interval	60	Sec	ond		
Failure Count	1				
IP Address to Ping Ping Interval Failure Count	168.95.1.1 60 1	Sec	ond		

## 3.3 VLAN Setup

The default Router mode supports 16 groups of virtual network services. By default, each virtual network supports the 802.1Q Tag VLAN function. The administrator only needs to click Enable, and the system will be able to complete the setting of 802.1Q Tag VLAN.

:=	III VLAN List						
#	VLAN Mode	Flag	IP Address	Netmask	Action		
0	On	Native	192.168.2.1	255.255.255.0	Network 🖕

- VLAN Mode : Display on/off for the VLAN network.  $\geq$
- $\succ$ Flag: Display master VLAN and VLAN Tag No. information.
- $\geq$ **IP Address**: Display IP Address for VLAN Network.
- $\geq$ **NetMask** : Display IP netmask.
- $\geq$ Action: click Network \_ button o set VLAN network functions , click Network Pull-down menu to" Bandwidth Control" and "DHCP Server".

V1.1

+(886) 2-8911-6160

## 3.3.1 Network Button

Administrator can c	lick Network	button to set VLAN ne	etwork functions.
VLAN Setup			
VLAN Mode	Enable	○ Disable	
IP Setup			
IP Address	192.168.2.1		
Netmask	255.255.255.0		
VLAN Tag Setup			
VLAN TAG	1-4093		

- **VLAN Mode**: Administrator can select Enable or disable for the VLAN Network.  $\checkmark$
- $\checkmark$ IP Mode: Administrator can select enable or disable function for VLAN IP.
- $\checkmark$ **IP Address/ NetMask**: Administrator can set IP address and netmask for the VLAN.

VLAN services and IP addresses must have at least one set of VLAN services. Do not turn off the default set of virtual network service (VLAN) functions (equal to no LAN state), which will cause the need to return to the default values. Need to re-setting again for the device.

## 3.3.2 Pull-down menu @ Bandwidth Control

Administrators can set bandwidth limit the max/min bandwidth of the Wi-Fi users, Bandwidth control can set IP/MASK, IP Range, Port(Service), SIP, RTP/RTSP and WEB.

Bandwidth Control			
Mode Session Limit Per IP	Enable     1024	O Disable	
Total Bandwidth Control			
Mode	○ Enable	Disable	
Upload	10240		Kbps
Download	10240		Kbps

- **Mode : IP:** Administrators can choose to enable or disable bandwidth control function.  $\triangleright$
- $\geq$ Session Limit Per IP: Session limit by all IP address, The default value is to limit the use of each user IP to 1024 Sessions
- $\geq$ Total Bandwidth Control: UP/Download bandwidth limit by VLAN
- $\geq$ OoS Rule List: Administrator can set IP/MASK , IP Range, Port(Service), SIP, RTP/RTSP and WEB to management bandwidth, Max can set 10 rule.

QoS	€ QoS RuleList							
#	Active	Rule Mode	Value1	Value2	Upload(Kbps)	Download(Kbps)	Comment	
1		ANY			1024	1024		
	_	ANY						
2		IP/Mask			1024	1024		
3	П	IP Range			1024	1024		
		SIP			1024	1024		
4		RTSP			1024	1024		
		RTP						
5		WEB			1024	1024		

- Any: Bandwidth control by any protocol.
- **IP/MASK:** Bandwidth control by a subnet.
- **IP Range:** Bandwidth control by IP range.
- Port: Bandwidth control by port (service), ex. FTP port (20,21)
- SIP: Bandwidth control by Session Initiation Protocol.
- **RTSP/RTP:** Bandwidth control by Streaming.
- **WEB:** Bandwidth control by web protocol.

### 3.3.3 Pull-down menu @ DHCP Server

Administrator can set DHCP function. Please click Network \_ pull-down button to set DHCP Server.

DHCP Service			<b>DHC</b>	P Client List				
Mode	Enable	○ Disable	#	IP Address	MAC Address	Hostname	Expired	Action
DHCP Relay	○ Enable	Disable	-	-	-	-	-	-
			Static	Lease IP Setup				
DHCP Setup				Comment				
Start IP	192.168.2.10			IP Address				
End IP	192.168.2.100			MAC Address				Add
Netmask	255.255.255.0			MAC Address				Aut
Gatoway	192 168 2 1		E Static	Lease IP List				
Gateway	102.100.2.1		#	Comment	IP Address	MAC Ad	dress	Action
DNS1 IP	192.168.2.1		-	-	-	-		-
DNS2 IP								
WINS IP								
Domain								
Lease Time	86400							

- ✓ **Mode:** Administrator can select enable / disable the function
- $\checkmark$ DHCP Relay : Administrator can select enable / disable the function

DHCP Service		
Mode	Enable	$\bigcirc$ Disable
DHCP Relay	Enable	○ Disable
E DHCP Relay Setup		
Server Interface	VLAN10	~
Cerio@ 2024	WAN0 WAN1 WAN1 VLAN2 VLAN1 VLAN2 VLAN3 VLAN3 VLAN5 VLAN6 VLAN5 VLAN6 VLAN7 VLAN8 VLAN7 VLAN8 VLAN9 VLAN10 VLAN11 VLAN12 VLAN13 VLAN13 VLAN14 VLAN15	

- Server Interface : For this function, you can choose to have DHCP Relay follow the interface, you can choose the enabled WAN0~2 interface, or choose the DHCP settings of other VLAN interfaces VLAN1~VLAN15.
  - $\checkmark$ Start IP: Set Start IP for DHCP Service.
  - End IP: Set End IP for DHCP Service.  $\checkmark$

- $\checkmark$ Netmask: Set IP Netmask, the default is 255.255.255.0
- $\checkmark$ Gateway: Set Gateway IP for DHCP Service.
- DNS (1-2) IP: Set DNS IP for DHCP Service.  $\checkmark$
- $\checkmark$ WINS IP: Enter IP address of the Windows Internet Name Service (WINS) server; this is optional.
- $\checkmark$ Domain: Enter the domain name for this network.
- $\checkmark$ Lease Time: The IP addresses given out by the DHCP server will only be valid for the duration specified by the lease time. Increasing the time ensure client operation without interruptions, but could introduce potential conflicts. Lowering the lease time will avoid potential address conflicts, but might cause more interruptions to the client while it will acquire new IP addresses from the DHCP server. Default is 86400 seconds

- Authentication Log: Account authentication log will copy to the device 's syslog server.
- Session Log: If network have Syslog server. Administrator can to system → management setting IP address for syslog server and enable the function. Account session log will copy to the device 's syslog server.
- Local User : Administrator can enable authentication for local user. Create user account can to reference "3.4.2 Local User".
- **RADIUS**: Authentication support remote RADIUS Server. Administrator can enter security information for remote RADIUS Server.

## **# Authentication Dropdown Button**

: By Clicking the Dropdown button, Administrators can set authentication functions.

Authentication

**USER MANUAL** CenOS 5.0 SOFTWARE

Guest
Local User
OAuth 2.0
Customize Page Language
Walled Garden Privilege Address
Profile

#### 3.4.1 Guest

Administrator can enable or disable guest authentication. If enabled, the administrator can set guest Count Limit / login time and type and flow control.

Guest				
	Sevice	Enable	$\bigcirc$ Disable	
	Login Type	One Time	○ Multiple	Time
	Count Limit	10		
	Login Time	10		Minutes
	QoS	○ Enable	Olsable	
	Upload	512		Kbps
	Download	512		Kbps

- Service : Administrator can select enable or disable this function.  $\geq$
- >Login Type :
  - **One Time:** Login to start counting until the end of time.
  - Multiple Times: logout time will stop counting until the next re-login to time start counting.
- $\geq$ **Count Limit:** Administrator can set guest limit.
- $\geq$ Login Time: Within a certain timeframe with no traffic, the system will auto logout. (The default is 10 minutes, you can fill in 0-720 minutes and 0 is unlimited).
- $\succ$ QoS: Administrator can restrict the traffic of guest. Traffic management can set users upload and download traffic.

#### Local User 3.4.2

Administrator can create local user account for web login.

E Local User		III Loca	🖬 Local User List				
User Name	(3-32 chars)	#	Name	Action			
Password	(4-32 chars) Add	1	oerio	Delete			
		2	danny	Delete			

- $\triangleright$ User Name: Administrator can create users account.
- $\geq$ **Password**: Set account password.

#### 3.4.3 OAuth2.0

The OAuth2.0 function supports Facebook and Google by default. Users can add additional OAuth2.0 servers through UI settings.

OAuth 2.0 Provider List			Create New Provider
#	Active	Provider	Action
1	Off	Google	Edit 🚽
2	Off	Faoebook	Edit 🔶

- **#**: Display items.
- Active : Display on/off status for the authentication.
- Provider : Display authentication server. The system default use authentication server for Google and Facebook

## → # Sample for Google OAuth2.0 setup

Please complete the application on the Google website to receive an account ID and password, follow the steps below.

Step.1 Please go to the Google Developers Console page and create a project (Reference https://developers.google.com/identity/protocols/OAuth2)

erio-aap-lo	gin 🕜 Ed	lit			
ons					
	cerio-aap-log ons	cerio-aap-login 🕜 Ed ons	cerio-aap-login 🕝 Edit ons	cerio-aap-login 🕜 Edit ons	cerio-aap-login 🕜 Edit ons

Step.2 Click Credentials to create OAuth client ID in the API manager page.

	API key Identifies your project using a simple API key to check quota and access. For APIs like Google Translate.
	OAuth client ID Requests user consent so your app can access the user's data. For APIs like Google Calendar.
	Service account key Enables server-to-server, app-level authentication using robot accounts. For use with Google Cloud APIs.
RPI API Manager	Help me choose
🔹 Overview	Create credentials
o₊ Credentials	

Step.3 Select web application in the "Application Type" section and set "Restrictions" URL.

### Name

Web client 1

#### Restrictions

Enter JavaScript origins, redirect URIs, or both

#### Authorized JavaScript origins

For use with requests from a browser. This is the origin URI of the client application. It can't contain a wildcard (http://\*.example.com) or a path (http://example.com/subdir). If you're using a nonstandard port, you must include it in the origin URI.

http://www.example.com

#### Authorized redirect URIs

For use with requests from a web server. This is the path in your application that users are redirected to after they have authenticated with Google. The path will be appended with the authorization code for access. Must have a protocol. Cannot contain URL fragments or relative paths. Cannot be a public IP address.

http://www.example.com/oauth2callback

### Step.4 Set Authorized JavaScript origins and Authorized redirect URLs (important)

Administrator must set login URL in the device function. After complete set of login URL go to the **"Restrictions"** function in web page. Follow the steps below to set login URLs

- Setup login URL in the device. Please Click system Authentication and enable the function.
- The "Authentication Setup" page to set Login URL

Authentication Setup			
Multiple Login	3		User(s)
Login Timeout	10		Minutes
Redireot URL	http://www.google.com		
Login URL	domain0.login.com		
Session Log	○ Enable	Olsable	

After complete set of login URL go to the **"Restrictions"** function in web page. Copy and paste the login URL from the system display into the "Restriction" page on the Google Developer website.

- Google Authorized JavaScript origins URL is http://domain0.login.com (same as Login URL)
- Google Authorized redirect URLs is http://domain0.login.com/login/callback.cgi

#### Authorized JavaScript origins

For use with requests from a browser. This is the origin URI of the client application. It can't contain a wildcard (http://\*.example.com) or a path (http://example.com/subdir). If you're using a nonstandard port, you must include it in the origin URI.

#### Authorized redirect URIs

For use with requests from a web server. This is the path in your application that users are redirected to after they have authenticated with Google. The path will be appended with the authorization code for access. Must have a protocol. Cannot contain URL fragments or relative paths. Cannot be a public IP address.

http://domain0.login.com/login/callback.cgi

**Step.5** After completing the "Restrictions" setup, click the create button. An OAuth Client page will pop-up with your "client ID" and "client secret". Administrators must copy and paste their client ID and secret into the OAuth 2.0 Setup page in our software UI.

OAuth client		
Here is your client ID		
	googleusercontent.com	Ē
Here is your client secret		
cDYwM		
ОК		
OAuth 2.0 Setup		Advanced
Client ID		pps.googleuse
Client Seoret	YwM	

Save and reboot the AP system, complete the setup.

### ➔ # Sample for Facebook OAuth2.0 setup

Please complete the application on the Facebook website to receive an account ID and password, follow the steps below.

Step.1 Please to Facebook developer's page and add a New App

### Step.2 Select WWW function

If you're developing on another platform or want to skip this step for now, use the basic setup.

### **Step.3** Administrator must set www for your information.

## Create a New App ID

Get started integrating Facebook into your app or website

#### **Display Name**

The name of your app or website'	
Namespace

Category	
Choose a Category 🔻	

### Step.4 Please click "Setting" and add Platform

V1.1

+(886) 2-8911-6160

### Step.5 Select Platform for "Website"

Select Platform			
f		é	
Facebook Canvas	Website	IOS	Android
Windows App	Page Tab	Xbox	PlayStation

### Step.6 Enter URL is http://domain0.login.com/login/callback.cgi

Site URL	
http://domain0.login.com/login/callback.cgi	

Administrator must set login URL in the device function. After complete set of login URL go to the "Facebook Site URL" function in web page. Follow the steps below to set login URLs

- Setup login URL in the device. Please Click system -> Authentication and enable the  $\geq$ function.
- $\geq$ The "Authentication Setup" page to set Login URL

Authentication Setup		
Multiple Login	3	User(s)
Login Timeout	10	Minutes
Redireot URL	http://www.google.com	
Login URL	domain0.login.com	
Session Log	○ Enable	Olsable

After complete set of login URL go to the "Facebook Site URL" function in web page. Copy and paste the login URL from the system display into the "Site URL" page on the Facebook website.

Step.7 Click Advanced function to enable the "Native or desktop app?" and "Is App Secret embedded in the client? "

Settings	
Baslo Advanced	
Roles	
Alerts	
Basic	Advanced
Yes Native or desktop app? Enable if your app is a native or desktop app	Yes         Is App Secret embedded in the olient?           This restricts the app secret usage to methods allowed by a client token [?]

Step.8 After completing the "Facebook Site URL" setup. Administrators must copy and paste their App ID and App secret into the OAuth 2.0 Setup page in our software UI.

	AAP_TEST This app is in development mode and can only be used by app admins, developers and testers [?] API Version [?] App ID	
050	App Seoret	Reset

i∎ OAuth 2.0 Setup	Advanced
Cilent ID	9
Client Seoret	26

Client ID and Client Secret setup by third parties such as Facebook and Google are (Solution) Notice subject to change. The instructions above follow the 2016 setup procedure. Any future changes to the Facebook/Google process may lead to our instructions becoming invalid.

#### 3.4.4 **POP3 Server**

The purpose of this integrated function is to allow clients to link a POP3 server for receiving emails from a remote server.

■ POP3 Server			E POP3 Server Test	
Service	Enable	○ Disable	EMAIL	
			Password	Test
E POP3 Settings				
Display Name	POP3 User			
Host				
Port	25	Port		
Connect Type	None			

- **POP3 Server**: Click "Enable" or "Disable" to activate this function
- Display Name : Set the "Display Name" based on the appropriate POP3 user or client
- Host : Define the desired Host server name
- Port : Input the proper port number for the corresponding server
- Connect Type : Select the Connect type with options of "STARTTLS", "SSL/TTL", or "None"
- POP3 Server Test : Use this tool to test if the POP3 server is operating correctly with your selected email

#### 3.4.5 **Customize Page**

This function is to customize the user Login Page. This supports Multiple Language and allows comprehensive customization through HTML editing.

Page Setup			Preview	
Template	Enable	○ Disable		
Multiple Language	○ Enable	Disable		Please sign in
■ Page Color Setup				User Name
Style	Default	V Apply		Password
Body Baokground	#EEEEEE			□Remember me

### Page Setup

- $\succ$ **Template** : Administrator can select Enable or disable.
  - Select enable to active default Login Page

Please sign i	ı
User Name	
Password	
Remember me	
Sig	n in
Gu	est
AD1	AD2
AD3	AD4
AD5	

Select disable to active HTML Source code window for customization

-	Customize HTML Source code
	<html></html>
	<head></head>
	<title>Hotspot</title>
	<script charset="utf-8" src="/javascripts/login.js" type="text/javascript"></script>
	<body></body>
	<div class="container"></div>

Sample: See sample login page below that is customized by html coding (sample login page html code templates are available on Cerio website)

### The following function uses the enabled Template

- Multiple Language : Administrator can select enable or disable multiple language for login page. Administrator must to Language function create new language.
- > Page Color Setup : Administrator can change the login page color.

## 3.4.6 Language

Administrator can create other language for login page.

🖬 Language		
Language	English	
Default Language	Enable	○ Disable

## 3.4.7 Walled Garden

This function provides certain free services or advertisement web pages for users to access the websites listed before login and authentication. User without the network access right can still have a chance to experience the actual network service free of charge in Walled Garden URL list.

USER I	MANUAL
CenOS 5.0 SC	DFTWARE

Walled Garden		
Display Name	(4 -32 chars)	
IP Address/Domain		
Full URL		Ade

- Display Name: Set name of Website.  $\geq$
- IP Address/Domain: Set IP or Domain of the Open the website.  $\geq$
- $\triangleright$ Full URL: Set full website name.

#### **Privilege Address** 3.4.8

This function provides local device can access Internet without authentication. If there are some workstations belonging NGS Access Point that need to access to network without authentication, enter the IP or MAC address of these workstations in this list.

Privilege Address	
Device Name	(4-32 characters)
IP Address	
MAC Address	Add

- Device Name: Enter Device or Users Name.
- IP Address: Enter used IP Address of Device or Users PC.  $\geq$
- MAC Address: Enter MAC Address of Device or Users PC.  $\geq$

#### 3.4.9 **Profile**

Administrator can backup current authentication configuration and login page for HTML Source code. But also can recover.

🖬 VLAN Profile		
Download Profile Setting	Download	
Upload Profile Setting	Choose File No file chosen	Upload
III VLAN Customize Page		
Download Customize Page	Download	
Upload Customize Page	Choose File No file chosen	Upload

Click "Save" button to save your changes. Then click Reboot button to activate your changes.

## 3.5 High Availability

When Gateway systems downtime working, the all network will can't normal work. If administrator set the high availability feature will be able to reduce the accidental interruption of the network and prevent against data loss.

CERIO **DR-4000** support system backup of the high availability function can mirror backup to many **DR-4000**.

Please click **"System"**→ **"High Availability"** to set the function.

🖶 System	E Service		
Mode Setup	Service	Enable	○ Disable
WAN Setup WAN Traffic Setup	High Availability Setup	Master	O Baokun
VI AN Setup	Virtual Router ID	51	
Authentication	Priority	100	
High Availability	Advert Interval	1	Seconds

Service: Administrator can select Enable or Disable the HA function.

### **High Availability Setup**

- State: Administrator can set HA type of the Master or Backup.
- Virtual Router ID: Administrator must set same virtual router ID in all the high availability devices
- > **Priority:** Administrator can set the priority level.
- Advert Interval: After how many sec to the recovery.

### Virtual IP Setup: Administrator can set HA function in different VLAN.

V1.1

+(886) 2-8911-6160

V Service	-		
	Service	Virtual IP Address	Edit
Off	ff		Edit
Off	f		Edit

#### **VPN Settings**

- VPN Hostname: Administrator can set a VPN host name. Each VPN host name can't be the  $\geq$ same and can't have special symbols.
- $\geq$ Bridge Mode: Administrator can select bridge mode by VLAN or Manual.
- $\geq$ DHCP filter: You can choose to enable or disable it. When it is enabled, it can prevent the DHCP server IPs of the physical area network at both ends from sending IPs out of bounds. (You only need to enable this function unilaterally. If the DHCP filter is turned on at both ends, the network logic will be incorrect and the VPN cannot be successfully connected)
- $\succ$ Bridge VLAN: If bridge mode select VLAN, administrator can select set VLAN 0~7 for VPN bridge.
- $\geq$ VPN IP Address/Netmask: If bridge mode select manual, administrator must set an IP address/netmask for the VPN link and must set routing of LAN.

 $\geq$ 

- 1. If administrator choose use bridge mode then VPN both sides beneath need use same c ۲ class network. Notice If administrator choose use manual set IP address then must set IP routing of LAN 2.
- VPN Port: Administrator can set Port for VPN. >
- **Encryption**: Select VPN security of encryption type.  $\succ$

#### **VPN Public Key**

VPN Public Key			
BEGIN RSA PUBLIC KI MIIBCgKCAQEAvP+C8pLM 166MrHJDAXMEaTp0Q0ge PVUaJBcZKXP16vaYPI0wl H80qQF/vhZ16XVYONueBi 6+PPrQa+Yo5ZkfwcmREz /6QDfu7UP304QFj03eJNds END RSA PUBLIC KEY	Y uhpJAvosinhaOxPMgSbpO h5Zr2MRAQUYErICrXwMn I4VYLEATo/op7G0Bm2a0Ni I4941b5cMIeQpuMLoqjrZ7 yR+PofKzPLJGWze3/IM9h- N6VBshm9+TtQIDAQAB 	ULSPhkLR1VNT65N6hqMvGcjH S4wqDqsjYtniLsGPMLSaRN+W Zjlh4j0tEJorua/k3jSUYa2 7kLTo/447o+4UxMYu2m05W ++AoLXmhWlvAU2Y3bbg/G3n	
Generate Publi	Gen Key		
Download Publi	Dowload		

- Generate Public Key: Administrator can click the button to regenerate the VPN public key.  $\geq$
- $\geq$ Download Public Key: Administrator can click the button to download the VPN public key.

## 3.7 VPN Peer Setup

۲ Notice

When administrator set 3.6 VPN server is complete, this page must setup a real IP address and upload VPN key of the other end.

## Administrator can create new VPN connection for the VPN Peer. Please click "System" → "VPN Peer Setup"

🖶 System 👻	III VPN F	Peer List						Create New Peer
	#	Mode	Hostr	ame	Description	on	WAN IP	Action
Mode Setup	-	-	-		-		-	-

L2TPD Server Setup		Ho	ostName					
PPTPD/L2TPD Account Setup		Real IP/	/Domain					
PPTP/L2TP Client Setup		V	/PN Port	656				
IPsec Setup		Des	oription					

- $\geq$ **Mode:** Administrator can select Enable or Disable the service.
- HostName: Administrator can set VPN host name in this field.  $\geq$
- Real IP/Domain: Administrator can set remote real IP address or Domain name in this field.  $\geq$
- $\geq$ **VPN Port:** Administrator can set connection Port for VPN.
- $\geq$ **Description:** Enter the description for the VPN Peer. (This is optional fill in and will not affect VPN connection settings)

#### Basic instructions for setting the program

In the two end points A and B for example

1. Set the VPN server on the A side, and download and store the VPN Public Key, the A Public Key upload it to the B endpoint for authentication. The same is true for the B endpoint setting. (Two-end exchange public key)

2. Establish remote VPN Server information and upload the remote Public Key to this location.

VPN Server Setup	
VPN Peer Setup	

 After completion, administrator can use ping command go to ping remote network IP address. If A ping to B side can get respond indicates that the VPN tunnel has been successfully established.

	C:\Users\jacky>ping 192.168.2.1 -t
Connection-specific DNS Suffix .: Description : Realtek Gaming USB 2.5GbE Family Controller Physical Address : 00-E0-4C-68-00-B0 DHCP Enabled : Yes Autoconfiguration Enabled : Yes Link-local IPv6 Address : fe80::6dbb:e9be:1a09:9973%10(Preferred) IPv4 Address : 192.168.101.63(Preferred) Subnet Mask : 255.255.255.0	Pinging 192.168.2.1 with 32 bytes of data: Reply from 192.168.2.1: bytes=32 time=3ms TTL=64 Reply from 192.168.2.1: bytes=32 time=1ms TTL=64 Reply from 192.168.2.1: bytes=32 time=2ms TTL=64 Reply from 192.168.2.1: bytes=32 time=1ms TTL=64 Reply from 192.168.2.1: bytes=32 time=1ms TTL=64 Reply from 192.168.2.1: bytes=32 time=16ms TTL=64

#### A Side

B Side

- 4. Special attention to the fact that the respective Client settings of the final VPN server and the VPN Peer settings of both parties must be enabled for the VPN Peer connection to be successful.
- 5. Kindly remind, please set up correctly and enable the DHCP filtering function. When using DHCP Server to allocate IP, it can be enabled according to the environment to prevent the physical area networks at both ends from crossing the boundary and allocating IPs to each other, causing the IP obtained not to be the real IP allocation. You will then be unable to access the Internet normally. You must choose to enable filtering on either side to prevent non-local DHCP servers from assigning IPs and thus avoid cross-border assignments. Please pay special attention to this part and do not enable this feature on both ends. If DHCP filtering is enabled on both ends, a network logic error will occur, causing the VPN connection to fail.

## 3.8 PPTP Server Setup

(3) Notice This VPN function support three protocol are VPN Server > PPTP/L2TP and IPsec, the VPN tunnel of these three types only select one VPN protocol to used it.

Use the PPTP protocol to build a VPN tunnel; administrator can setup PPTP server of the VPN tunnel in the function.

#### Please click "System" → "PPTP Server Setup"

😤 System 👻			
Mode Setup			
WAN Setup	PPTP Server Settings		
	Connections	10	
VPN Server Setup			
VPN Peer Setup	Local IF Address		
	Remote Start IP		
PPTP Server Setup	Address		
L2TPD Server Setup	Remote End IP		
PPTPD/L2TPD Account Setup	Address		
PPTP/L2TP Client Setup	MPPE40	Enable	
IPsec Setup	MPPE128	Enable	○ Disable

#### $\geq$ Connections: Administrator can set connected VPN client Qty.

Local IP Address: Set virtual IP address for VPN server.  $\geq$ 

۲	This IP address is set as a VPN-specific virtual IP address tunnel, the IP address can't set same
Notice	subnet of the WAN and LAN (network).

- $\succ$ Remote Start/ End IP Address: Set start to end IP address for dynamic configuration, can give VPN client automatically obtain a virtual IP address.
- MPPT40/128: Administrator can choose use VPN security for 40 or 128 bit.  $\geq$

## 3.9 L2TP Server Setup

(C) Notice This VPN function support three protocol are VPN Server > PPTP/L2TP and IPsec, the VPN tunnel of these three types only select one VPN protocol to used it.

Same as PPTP, L2TP protocol to build a VPN tunnel; administrator can setup L2TP server of the VPN tunnel in the function.

#### Please click "System" → "P2TP Server Setup"

DPD	Enable	○ Disable
DPD Delay	30	
DPD Timeout	120	

- DPD: DPD (Dead peer detection) is a method that network devices use to verify the current existence and availability of other peer devices. The system can waiting for DPD acknowledgements (R-U-THERE-ACK messages) from the peer. The DPD function must be enabled on both ends of the VPN host. The system on one side can wait for a delay time packet access from the remote stationary device and respond with the packet to ensure that the host knows that both parties are active. normal status. When no response message is received from the host after the set Timeout time, the host will use the DPD mechanism to automatically start the VPN reconnection process. This feature is enabled by default. Administrators are recommended to use this feature. This is to avoid the possibility of the VPN not being able to automatically reconnect after being disconnected.
- DPD Delay: Administrator can set delay time (seconds) for DPD. (The default value is 30 seconds for packet access to the opposite VPN host.)
- DPD Timeout: Administrator can set timeout of times for DPD. (The default value is 120 seconds. When the peer host does not respond normally according to the access period set by Delay, the DPD automatic VPN connection process is automatically started.)

#### **IKE Policy:**

This function is verification the VPN identity. The VPN to establish a connection with each other must be certified to establish a trust relationship between each other, this function supports IKE Phase 1/2.

IKE Policy				
IKE Mode	○ Main	○ Aggressive		
IKE Authentication	MD5	~		
Encryption	3DES	~		
DH Group	DH1	~		

> IKE Mode: Administrator can select Main or Aggressive of the IKE. If device uses Router

- > IP(1~4) : Enter the IP addresses of the remote hosts to receive trap messages.

## 3.16 DDNS

Dynamic Domain Name Server, referred to as DDNS dynamic DNS technology. According to the Internet domain name establishment rules, domain names must follow a fixed IP address. However, the dynamic DNS system provides a fixed name server (Name server) for the dynamic domain, which allows external users to connect to the dynamic user's URL through real-time updates. This system has built-in support for 2 service providers, namely dyndns and no-ip.

Please click on System -> DDNS and follow the below setting.

🖨 System 🗸

# 4. Account

This function is a RADIUS server such as the Cerio APs to utilize the RADIUS server authentication of **DR-4000**, and its many authentication types. When Cerio APs enable authentication through external RADIUS server, administrators must first set the IP address of **DR-4000** in each managed access point to properly redirect authentication clients.

Cerio's **DR-4000** Account functions support Package, Pregenerated Tickets and remote LDAP(AD) authentication type.

# 4.1 RADIUS Server

🗲 Aooount 🗸			
dus Server

- Service: Administrator can select Enable or Disable the RADIUS Server.
- Authentication Port: Administrator can set authentication port for RADIUS Server, the default port is 1812.
- Accounting Port: Administrator can set accounting port for RADIUS Server, the default port is 1813.
- **Radius Secret:** Administrator can set password (Secret key) for RADIUS Server.

# 4.2 Remote LDAP Setup

Remote LDAP Setup enables Remote LDAP authentication for managed access points. Administrators wishing to enable Remote LDAP authentication must copy and paste **DR-4000's** LDAP Server **"RADIUS Port"** number into the managed APs "Authentication Port" box, which is found in the managed Cerio APs **"Radius Setup"** window. Administrator can set up 4 remote LDAP Server.

LDAP Server				
Service	Enable	○ Disable		
Radius Port	11812			
Radius Seoret	••••			

- Service: Administrator can select Enable or Disable the authentication function.
- Radius Port: Administrators can set the Radius server port of the DR-4000 to provide such as Cerio APs links. If Cerio APs set this Radius Port will can use remote LDAP(AD) type to authentication.
- Radius Secret: Administrator can set password (Secret key) for RADIUS Server.

- $\geq$ Create New Package: Administrator can click "Create New Package" button to set package rules.
- #: Package list (0~9) is Network control server (SP-800) code, administrator can choose  $\geq$ code to print account.

Package Setup	
Paokage Name	(4-32 chars)
Desoription	(4-64 chars)
Traffio Volume	МВ
Session Time	Minutes
Expire After	Minutes
Expiration	Unlimited

- Package Name: Administrator can set Identify name for the package rules.
- **Description**: Administrator can set the description for package rules.
- **Traffic Volume:** Administrator can set authentication account use traffic limit for the package rules.
- Session Time: Administrator can set authentication account use session limit for the package rules. (After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.)
- Expire After: Administrator can set authentication account use how many hours expire.( After the account is signed in, the system start counted time until the end time.)
- **Expiration**: Administrator can select Unlimited or Per Day or Until Time.

Expiration	Unlimited	/
	Unlimited	
	Per Day	
	Until Time	

- ✓ **Unlimited:** After the account is signed in, the system does not count the time
- Per Day: After the account is signed in, the system start counted time until the end time.
- ✓ Until Time: After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.

Account Rule				
User Name Length	(3-16)			
User Name Type	○ <sub>Dlgit</sub>	⊖ Letters	⊖ <sub>MIx</sub>	
	□No L/1/1	□ No 0/0	□ No U/V	
Password Length	(4-16)			
Password Type	○ Digit	Letters	⊖ <sub>MIx</sub>	
	No L/I/1	□ No 0/0	□ No U/V	

- **User Name Length:** Administrator can set account length limit for package rules.
- > User Name Type: Administrator can create account use digit or Letters or Mix for

package rules. If administrator select Letters or Mix can filter L/I/digit 1 and O/ digit 0 and U/V for letters and Mix.

- > Password Length: Administrator can set password length limit for account.
- > Password Type: Administrator can set password use digit or Letters or Mix for account. If administrator select Letters or Mix can filter L/I/digit 1 and O/ digit 0 and U/V for letters and Mix.

## 4.4 Create An Account

Administrator can set and create an account of validity for the RADIUS Server.

# Please click "Account" → "Create an account"

	¢ Aooount →
Radius Server Remote LDAP	r Setup
Paokage Setu	p
Create An Aod	oount
Searoh Aooou	int
Pregenerated	Tlokets DB

Account Setup			
User Name	(4-32 chars)		
Password	(4-32 chars)		
Paokage	Test-4 (use 120 minutes expire)		~ Apply
Traffio Volume	0		МВ
Session Time	0		Minutes
Expire After	0		Minutes
Expiration	Disable	$\bigcirc$ Enable	

User Name : Administrator can set an account for RADIUS Server. >

- > Password : Enter Password for user name account.
- > Package: Administrator can choose apply mechanically Package function policy.
- Traffic Volume: Administrator can set authentication account use traffic limit for the package rules.
- Session Time: Administrator can set authentication account use session limit for the package rules. (After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.)
- Expire After: Administrator can set authentication account use how many hours expire.( After the account is signed in, the system start counted time until the end time.)
- **Expiration**: Administrator can select Unlimited or Per Day or Until Time.

Expiration	Unlimited	~
	Unlimited	
	Per Day	
	Until Time	

- Unlimited: After the account is signed in, the system does not count the time
- **Per Day:** After the account is signed in, the system start counted time until the end time.
- Until Time: After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.

## 4.5 Search Account

Administrator can search all account in the databases. The search function built-in smart-search engine, administrator can set want to query account the conditions.

Please click **"Account" → "Search Account"** 

🖌 Account –	Search Account		
	User Name	None v (4-32 chars)

**Project Nama:** Administrator can set a Databases name.

Traffic Cycle	Total 🗸
	Total
Traffic Volume	Daily
	Weekly
Session Time Cycle	Monthly

- Traffic Cycle: There is a reset period for traffic usage, and the pre-vouched account password will be eligible for repeated active use due to this reset period.
  - ✓ Total : Based on a one-time total calculation, the total amount of pre-ticketed account traffic will no longer be usable after it is exhausted.
  - Daily : Set "Daily" as the limit traffic reset to zero cycle period. The system fixes
     00:00 every day as the "Day" reset point.
  - ✓ Weekly : Set "weekly" as the cycle period for the quota traffic to be reset to zero. The system fixes 00:00 every Sunday as the "week" reset point.
  - ✓ Monthly : Set "monthly" as the cycle period for resetting the limit traffic to zero.
     The system fixes 00:00 on the last day of each month as the "month" reset point.
- Traffic Volume: Administrator can set authentication account use traffic limit for the package rules.

Session Time Cycle	Total	~
	Total	
Session Time	Daily	
Expire After	Weekly	
	Monthly	

- Session Time Cycle: The session time uses a reset period, and the pre-ticket account password will be eligible for repeated and active use due to this reset period.
  - Total : Calculated based on a one-time total, the pre-voucher account password Session time expires and can no longer be used.
  - ✓ Daily : Set "Daily" as the Session available time reset to zero cycle period, and the system fixes 00:00 every day as the "Day" reset span point.
  - ✓ Weekly : Set "weekly" as the reset zero cycle period for the session's available time. The system fixes 00:00 every Sunday as the "week" reset span point.
  - ✓ Monthly : Set "monthly" as the reset zero cycle period for the session's available time. The system fixes 00:00 on the last day of each month as the "month" reset point.
- Session Time: Administrator can set authentication account use session limit for the package rules. (After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.)
- Expire After: Administrator can set authentication account use how many hours expire.( After the account is signed in, the system start counted time until the end time.)
- **Expiration**: Administrator can select Unlimited or Per Day or Until Time.

- Unlimited: After the account is signed in, the system does not count the time
- **Per Day:** After the account is signed in, the system start counted time until the end time.
- Until Time: After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.

Pregenerated Rule			
User Name Length	4		
User Name Type	○ <sub>Digit</sub>	CLetters	<sup>●</sup> Mix
	□ No L/I/1	□No 0/0	No U/V
Password Length	4		
Password Type	○ <sub>Digit</sub>	$^{\bigcirc}$ Letters	● <sub>Mix</sub>
	□ No L/I/1	□No 0/0	No U/V
Tioket Number	100		

- User Name Length: Administrator can set account length limit for package rules.
- User Name Type: Administrator can create account use digit or Letters or Mix for package rules. If administrator select Letters or Mix can filter L/I/digit 1 and O/ digit 0 and U/V for letters and Mix.
- > Password Length: Administrator can set password length limit for account.
- **Password Type:** Administrator can set password use digit or Letters or Mix for account. If administrator select Letters or Mix can filter L/I/digit 1 and O/ digit 0 and U/V for letters and Mix.
- Ticket Number: Administrator can set number in the databases, the system will auto create accounts

## 4.7 Thermal Printer Setup

The function must match Account Ticket Generator POS System for Cerio's SP-800-PRINTER / SP-800-QRCPRT.

Application architecture is as follows.

# Match SP-800-PRINTER

- Command Port: Enter command port for Network control server (SP-800)
- > Printer Type: Administrator can select Normal Thermal Printer or QR Code Thermal Printer.

V1.1

+(886) 2-8911-6160

- Normal Thermal Printer: If use Cerio's SP-800-PRINTER POS system, administrator can select Normal Thermal Printer function.
- **QR Code Thermal Printer:** If use Cerio's SP-800-QRCPRT POS system, administrator can select QR Code Thermal Printer function.
- **COM Port:** Administrator can select connected COM1/2 or RJ-45 for Printer Port.
  - **RJ-45:** If printer type selected QR Code Thermal Printer, administrator can select use RJ-45 and set Printer IP address.

COM Port	RJ-45 ~
Printer IP Address	192.168.2.252
Printer Port	9100
QRCode Type	Small

- ✓ **Printer IP Address:** Administrator can set IP address for QR code Printer.
- Printer Port: Administrator can set Port for QR code Printer. The default Port is 9100 for Cerio's SP-800-QRCPRT
- ✓ **QR Code Type:** Administrator can select print QR Code size or close.
- New Look Password: The password is Network control server(SP-800) connect to DR-4000 use key lock. Administrator can change password, default password is 1234
- **Description:** Administrator can enter Description.

### # Package List

Print tickets account must have created Package; administrator can refer to "<u>4.3 Package Setup</u>" description.

Package List						
Package#	Enable	Name	Description			
1		TEST-1	no time			
2		test-2	50Mbps Trafflo			
3		test-8	use 120 minutes time			
4		Test-4	use 120 minutes expl			

Administrator can choose box to enable Packages rule.

## 4.8 History Log

The Page can display account login/logout information.

iii H	History Log

## 4.10 Database Maintenance

Administrator can clear account for Expiration / Pregenerated / All databases.

Account Database					
0	Clear				
0	Clear				
0	Clear				
	0 0 0				

Administrator click "Clear" button, the databases all account will be deleted.

# 5.Advance

## 5.1 IP Filter

Can allow or deny filter ingress or egress packets from specific source and/or to destination IP address on wired (LAN) or (WAN) ports. Filter rules support IP/ Port Groups, could be used to filter unicast or multicast packets on different protocols as shown in the IP Filter Setup. Important to note that IP filter rules has precedence over Access control rules. Administrator can set IP Filter rules: 64

Please click **"Advance"** → "IP Filter" setup.

Time Polloy	5					Always Run 👻

- Mode: Administrator can select Deny or Allow.
  - Deny: The MAC Filter List will be denied to access (LAN to WAN). Others will be allowed.
  - Allow: The MAC Filter List will be allowed to access (LAN to WAN). Others will be denied.
- Comment: Enter the description of MAC filter rule.
- MAC Address: Enter MAC address (e.g. aa:bb:cc:00:00:0a) and click "Add" button, then the MAC address should display in the MAC Filter List.
- $\geq$ Policy: Administrator can select to use rule by "Time Policy".

#### Virtual Server 5.5

The "Virtual Server" can also referred to as "Port Forward" as well and used interchangeably. Resources in the network can be exposed to the Internet users in a controlled manner including on-line gaming, video conferencing or others via Virtual Server setup. Don't repeat ports' usage to avoid confusion.

Suppose you want to assign ports 21-25 to one FTP, Telnet and SMTP server (A in the example), and port 80 to another (B in the example). You assign the LAN IP addresses and the ISP assigns

V1.1

the WAN IP address. The NAT network appears as a single host on the Internet.

- ✓ **TCP:** Deny TCP Protocol, Administrator can set TCP protocol and assign IP / IP range.
- ✓ **UDP:** Deny UDP Protocol, Administrator can set UDP protocol and assign IP / IP range.
- ✓ ICMP: Deny ICMP Protocol, Administrator can assign IP / IP range.
- ✓ **Content Filter:** Administrator can set web Keyword to filter.
- Application: System built-in multiple applications data, Administrator can select application data to filter.
- ✓ **Domain:** Administrator can set domain name to filter.
  - Schedule : The rule can apply Time Policy.

## 5.7 IP Routing Setup

The IP Routing Settings allows configure routing feature in the gateway. The system supports RIP(Routing Information Protocol ) and OSPF(Open Shortest Path First) dynamic routing and allows you to manually configure static network routes. Please click on Advance -> IP Routing and follow the below setting.

🗲 Advanoe –				
IP Filter				
IP Group				
Port Group				
MAC Eliter				
Virtual Server				
Access Control	OSPF Settings			
	Service	○ Enable	Olisable	
IP Routing Setup	Gernice			
IP Routing Rule Setup	Router ID	VLANO		$\sim$
Time Polloy	Distrubte RIP over OSPF	○ Enable	Olsable	

### > OSPF Settings :

OSPF (Open Shortest Path First) is a router protocol used to find the best path for packets as they pass through a set of connected networks.

- Service: Administrator can select enable or disable Service for OSPF.
- Route ID: Administrator can select WAN0~3 and VLAN0~7 interface (IP) for the Route ID.
- **Distribute RIP over OSPF:** Administrator can select enable or disable, if select enable system can allow RIP routes will redistributed into OSPF.

### **OSPF** Network Setting

■ OSPF Network Settings	
WANO Area	0
	0
WAN3 Area	0
VLAN0 Area	0
	0
	0
VLAN7 Area	0

 ✓ #Area: Represents the area code of the OSPF routing protocol, which can be any digit in decimal, default is 0.

### RIP Settings :

RIP defines a way for routers, which connect networks using the IP, to share information about how to route traffic among networks. RIP prevents routing loops by implementing limit on the number of hops allowed in a path from source to destination. The maximum number of hops allowed for RIP is 15, which limits the size of networks that RIP can support. A hop count of 16 is considered an infinite distance and the route is considered unreachable.

RIP Settings		
Service	○ Enable	Olsable
Distrubte OSPF over RIP	○ Enable	Disable

- **Service:** Administrator can select enable or disable Service for RIP.
- **Distribute OSPF over RIP:** Administrator can select enable or disable, if select enable system can allow OSPF routes will redistributed into RIP.

V1.1

Update SSL Certification From Local Hard Drive		
Certificate File	Choose File No file chosen	Upload

- Save Settings to PC: Click *Save* button to save the current configuration to a local disk.
- Load Settings from PC: Click Browse button to locate a configuration file to restore, and then click Upload button to upload.
- Reset To Factory Default: Click Default button to reset back to the factory default settings and expect Successful loading message. Then, click Reboot button to activate.

## 6.2 System Upgrade

Firmware is the main software image that system needs to respond to requests and to manage real time operations. Firmware upgrades are sometimes required to include new features or bugs fix. It takes around 2 minutes to upgrade due to complexity of firmware. To upgrade system firmware, click Browse button to locate the new firmware, and then click Upgrade button to upgrade.

**Firmware Information:** 

# Display the system firmware information.

**USER MANUAL** 

CenOS 5.0 SOFTWARE

III Firmware Information	
Sometimes it may be necessary to rebo delete any of your configuration setting	bot the system if it begins working improperly. Rebooting the system will not s. Click reboot button to reboot the system.
Firmware Version	Pme-CPE-IPQ60XX-CERIO V0.0.2
Firmware Date	2024/05/06 12:45:19
🗮 Upgrade Via Local PC	
Select File	Choose File No file chosen Upload
Upgrade Via TFTP Server	
TFTP Server IP	
File Name	Upload
Upgrade Via HTTP URL	
URL	Upload

### **Upgrade Via Local PC and TFTP Server:**

The upgrade firmware will support via local PC and TFTP Server and HTTP URL to upgrade system.

- $\succ$ Select File: Administrator can select Firmware file in Local PC.
- TFTP Server: Enter IP address for TFTP Server.  $\succ$
- File Name: Enter file name.  $\geq$
- $\succ$ URL: Administrator can enter path for Firmware file.

	1.	To prevent data loss during firmware upgrade, please back up current settings before
		proceeding
Notice	2.	Do not interrupt during firmware upgrade including power on/off as this may
		damage system.

## 6.3 Network Utility

The administrator can diagnose network connectivity via the PING or TRACEROUTE utility. Please click on Utility -> Network Utility and follow the below setting.

	J <sup>E</sup> Utility →			
Profile Setti	Ing			
System Upg	jrade			
Network Ut	liity			
Log Mainter	nanoe			
Reboot				
🔳 Ping U	Jtility			
	IP/Domai	n		
	Time	<b>s</b> 5		Ping

- $\geq$ **Ping**: This utility will help ping other devices on the network to verify connectivity. Ping utility, using ICMP packets, detects connectivity and latency between two network nodes. As result of that, packet loss and latency time are available in the Result field while running the PING test.
  - IP/Domain: Enter desired domain name, i.e. www.google.com, or IP address of the destination, and click ping button to proceed. The ping result will be shown in the Result field.
  - Times: By default, its 5 and the range is from 1 to 50. It indicates number of connectivity test.

6	Max. Hops

- **Traceroute** : Allows tracing the hops from the DR-4000 device to a selected outgoing  $\geq$ IP address. It should be used for the finding the route taken by ICMP packets across the network to the destination host. The test is started using the Start button, click **Stop** button to stopped test.
  - Destination Host: Specifies the Destination Host for the finding the route taken by ICMP packets across the network.
  - MAX Hops: Specifies the maximum number of hops (max time-to-live value) trace route will probe.

#### 6.4 Log Maintenance

Administrator can monitor Log storage status for Session/Authentication and System. Please click on Utility ->Log Maintenance and follow the below setting.

Session Log Maintenance		
File Size/Peroent	16.00KB	0%
Keep Date	2016-11-2	Delete
Authentication Log Maintenance		
File Size/Peroent	16.00KB	0%
Keep Date	2016-11-2	Delete
System Log Maintenance		
File Size/Percent	16.00KB	0%
Keep Date	2016-11-2	Delete

- File Size/Percent: Display used volume and percentage.  $\succ$
- $\succ$ Keep Date: Display creation date.
  - Delete button: Administrator can click "delete" button to clear log information.

#### 6.5 Reboot

This function allows user to restart system with existing or most current settings when changes are made. Click **Reboot** button to proceed and take around three minutes to complete.

Sometimes it may be necessary to reboot the system if it beg	jins working improperly. Rebooting the system will not delete
any of your configuration settings. Click reboot button to reb	oot the system.
Reboot	

# 7. Status

## 7.1 Overview

Detailed information on System, Network can be reviewed via this page.

Dverview		Information		
Mode	Router Mode 🗸	CPU Usage	Memory	Radius Log
System Name	DR-4000	0	17	0
System Time	2024/06/08 08:40:04	Session Log	Authentication Log	System Log

WAN#: Display information for WAN Port setting. Administrator can click Action button to connect or disconnect for WAN Ports.

## 7.2 Local System Log

The system log displays system events when system is up and running. Also, it becomes very useful as a troubleshooting tool when issues are experienced in system.

III System Log			Refresh
Time	Facility	Severity	Message
-		~	-

- **Time** : The date and time when the event occurred.
- Facility: It helps users to identify source of events such "System" or "User"
- Severity : Severity level that a specific event is associated such as "info", "error", "warning", etc.
- Message : Description of the event.
- Click "Refresh" button to renew the log
- Click "Clear" button to clear all the record.

## 7.3 Session Log

If enable "syslog server" in the "Session Log" (Hotsport Setup, Please refer to Chapter 3.4) and, the page can record account for session log. Session log page built-in smart-search function will display account use session information, administrator can use keyword or date approach to discover.

i≣ Session Log						
Name		Value				
Event Time	None	2016-11-21	2016-11-21			
AP IP	None					
VLAN ID	None					
Username	None					
Protocol	None	TCP				
Source IP	None					
Destination IP	None					
Source Port	None					
Destination Port	None					
Source MAC	None					

Administrators can choose different data type in the search engines.

- $\succ$ None: The program doesn't judge characters, search all the information
- $\succ$ Greater then: Search values for greater than
- $\succ$ Equal: Search values for equal.
- $\geq$ Less then: Search values for less then.
- $\succ$ Between: Search values for between.
- $\succ$ Like: Search similar strings.

#### Example for PPTP/L2TP setup 8.1

Create a VPN tunnel use server / client bridge for the PPTP / L2TP protocol, if PPTP server set virtual IP address is 10.10.10.1 then must also set start to end IP address for dynamic configuration, can give VPN client automatically obtain a virtual IP address. The following concept map

### **PPTP Server setup step**

1. Enable PPTP/L2TP Server and set VPN used virtual IP address. (Refer to 3.6 /3.7 for instructions)

USER	MAN	UAL
CenOS 5.0 S	SOFTWARE	

PPTP Server Settings		
Connections	3	
Local IP Address	10.10.10.1	
Remote Start IP Address	10.10.10	
Remote End IP Address	10.10.13	
MPPE40	Enable	○ Disable
MPPE128	Enable	○ Disable

2. Create authentication of client account and password

Account Setup							
User Name	danny						
Password	•••••						
PPTP Support	Enable	○ Disable					
L2TP Support	Enable	ODisable					

### Setup routing between the two networks

Routing Rule		
Local Subnet	192.168.2.0/24	
Remote Subnet	192.168.3.0/24	Add

## **PPTP Client setup step**

1. Set real IP address of remote VPN server and authentication account / password.

PPTP/L2TP Client Setup		
Active	Enable	O Disable
PPTP/L2TP Client Settings		
Mode	● PPTP	○ L2TP
Server IP Address	64.100.100.1	
User Name	danny	
Password	•••••	
PPTP Setup		
MPPE40	Enable	○ Disable
MPPE128	Enable	○ Disable

2. Setup routing between the two networks

Routing Rule List

#	Local Subnet	Remote Subnet	Action
1	192.168.3.0/24	192.168.2.0/24	Delete

When the setting is complete, the both of the network will be through the VPN tunnel for data transmission.

Administrator can track the discovery, both network is used VPN tunnel to transmission.

- COM1 Setting: Recommend use default  $\geq$
- $\geq$ **Network Setting:** 
  - Enable DHCP: Administrator can select enable or disable DHCP client.
  - Static IP Address: Administrator can set IP address for SP-800.
  - Static DNS Server: Administrator can set IP address for DNS server. •
  - Transmit Timer: system to detect controller connect status (millisecond).
  - Server Listening Port: SP-800 connection to controller use Port. (SP-800 and controller must be set the same port).

After setting is complete, please click Apply button.

## Install normal thermal printer

### # Install step for thermal paper

- 1) Open the cover for thermal printer
- 2) Place the thermal paper in the printer groove
- 3) After pull the paper out a small portion please close the lid for thermal printer

- 1) SP-800 connection to thermal printer use console port
- 2) DC Power in.
- 3) Power on/off switch.

## Install QR Code thermal printer

Behind the printer connection functions support USB / console / RJ-45 /RJ-11 and Power. As follows

### PS. Connect the controller only need to use RJ-45 and power.

### # Login web page for QR Code printer.

The QR Code printer support web management interface, administrator can login web page and modify IP address for the QR Code printer.

### QR Code Printer default IP address: 192.168.123.100

As follows

V1.1

### # Install or Replace Paper Roll for QR code printer

1) Pull the Cover Release Button to open the Cover.

2) Roll out and install the Paper Roll with Holder into the Printer. (with the edges of the paper roll holder fitted onto the holder slots)

+(886) 2-8911-6160

3) Please close the lid for thermal printer.

# **# DIP Switch Setting for QR code Printer**

DIP Switch in printer bottom.

DIP	Function	ON	OFF
1	Paper Cutter	No	Yes*
2	Audio Alarm	Yes *	No
3	Print Density	Dark	Light *
4	Two-byte Character Code	*No	Yes
5	Character Per Line	42	48 *
6	Cutter with Cash Drawer	Yes	No *
7&8	Baud Rate Setting		OFF*

# Baud Rate Setting (DIP 7, DIP 8)

19200 (\*Default)

V1.1

# Set web authentication steps for POS system

Cerio's Web Authentication System consists of the controller and SP-800 + Printer; administrator can use SP-800 remote control Cerio's controller to create an account and print out. The architecture can refer to "POS system application" description

## Set web authentication steps, as follows

(Take Cerio's DR-4000 as the case)

#### Steps1

Login SP-800 web interface to set IP address and set same network segment You can refer to "Login management interface for SP-800"

#### Steps2

If SP-800 with QR code Printer, administrator must set IP address for QR code Printer (same network segment for your network). You can refer to "Install QR Code printer"

#### Steps3

Login Cerio's Controller "DR-4000" page (Refer controller user manual) to enable RADIUS Server. As follows

Please click menu "Account" → "RADIUS Server" for Cerio's DR-4000

Radius Server					
Service	Enable	○ Disable			
Authentioation Port	1812				
Accounting Port	1813				
Radius Seoret	(4-32 chars)				

#### Steps4

Set the connection between **DR-4000** and SP-800. Please click menu **"Account" →**" **Thermal Printer Setup**" to enable function, as follows

Thermal Printer List							
Printer#	Service	IP Address	Description	Balance Time	Action		
1		192.168.2.253		00:00	Setup		
2				00:00	Setup		
3				00:00	Setup		
4				00:00	Setup		
6				00:00	Setup		
Printer Setup  Service  O Disable  Disable							
IP Address 192.168.2.253							

IP Address	192.168.2.253	
Command Port	5000	
Printer Type	Normal Thermal Printer	~
COM Port	C0M1	~
New Look Pasword	1234	
Description		
Balanoe Time	00 ~ 00	~

- > IP address: Please enter IP address for SP-800 (You can refer to Login SP-800)
- **Command port:** Please enter Command for SP-800 (You can refer to Login SP-800)
- > **Printer Type:** Administrator can select Printer for normal or QR Code Printer.
- **QR code Printer**: If select QR Code printer, administrator must choose use connection for IP address or com Port.(Recommend use IP address manner.)

Printer Type	QRCode Thermal Printer
COM Port	RJ-45 ~
Printer IP Address	192.168.2.252
Printer Port	9100
QRCode Type	Small

- $\checkmark$ Printer IP Address : Please enter IP address for QR code printer. (You can refer to Install QR Code Printer).
- $\checkmark$ **Printer Port**: Please enter command port for QR Code Printer. (You can refer to Install QR Code Printer)
- $\checkmark$ **QR Code Type** : Administrator can select print out size for QR code.
- $\geq$ **COM Port:** Please select connection type for printer.

ON Notice	1.	If use normal thermal printer and connect to com1 port of the SP-800, please select
		COM1
	2.	If use OR Code Printer, please select RJ-45

- $\geq$ New Lock Password : Enter pass key of the DR-4000 to connect SP-800
- $\triangleright$ **Description**: Administrator can enter description.

#### Steps5

Setup internet time rules for package authentication type (DR-4000). Please click menu "Account" → "Package setup". As follows

Package Setup					
Paokage Name	(4-32 chars)				
Description	(4-64 chars)				
Trafflo Volume		МВ			
Session Time		Minutes			
Expire After		Minutes			
Expiration	Unlimited	~			

- Package Name: Administrator can set Identify name for the package rules.  $\geq$
- **Description**: Administrator can set the description for package rules.  $\geq$
- Traffic Volume: Administrator can set authentication account use traffic limit for the package  $\geq$ rules.
- $\geq$ Session Time: Administrator can set authentication account use session limit for the package rules. (After the account is signed in, the system will begin counting until the set time is used up. The counting will stop when users log out, and begin counting again once the user signs back in.)
